St. Louis Dog Sitting

Zach Held
@ zachtheld

Description

- Web application for my dog sitting business for clients
- Clients can sign in and add information about themselves and information about their dogs
- Clients can view a calendar showing booked dates and dates that are open for scheduling
- Clients can write and read reviews about my services for others to read
- Messages can be sent for clients to book dates and ask any questions about my services

Features

- Calendar view so that clients can see dates for booking
- Information tables for users to add pets and persona information
- Messaging for clients to email me

Project Planning - User Stories

- Motivation came from my business. I have many clients and I needed a good way to keep track of their information.
- I wanted to show clients that their dates are indeed booked for the dates we spoke about.
- I wanted to gain new clients. They could view my website and read the reviews and about my services.

Planning - Database

- Databases are populated with user inputs. Their information and their pets information.
- The primary use of these databases is for me to keep track of where users live so I know where I am dog sitting. Also keeping track of the dogs information such as medication and dietary needs.

Technology Stack

- Java
- SQl Server Database
- Thymeleaf
- Spring Boot
- Bootstrap

Reviews

Zach is the best dog sitter. My Dogs are always excited when he comes to watch them!
— Nancy Held

1Pheobe and Hurley(my diva dogs) love when Zach comes to visit! He is so good with my dogs eventhough they can be a handful. I am never worried when I go away for the weekend and Zach is there!
— Natalie Beck

The best dog sitter around! Totally trust him with my dogs
— Natalie Beck

I have tried other dog sitters before but I have found the one I am sticking with.
— Mary Wente
